SPP H3 WBA

Certified. Compatible. Equivalent.

25 YEARS

At Southern Pine Products, we are committed to providing clarity and confidence in our timber treatment specifications. This bulletin outlines the certification and application guidelines for our SPP WBA H3 treated timber to ensure you and your builder customers have the correct technical information for your projects.

H3 WBA ≡ H3.2

Southern Pine Products H3 WBA is an approved H3.2 Equivalent treatment system.

CERTIFICATION & COMPLIANCE

Certified compliance as per the New Zealand Timber Preservative Council (NZTPC).

Statements from the NZTPC:
"SPP WBA H3 is treated to the H3 hazard class in accordance with AS/NZS 1604.1:2021."

"SPP's WBA H3 treatment is WOODmark certified [plant number 949] by the New Zealand Timber Preservation Council and is used by SPP as an **H3.2-equivalent treatment system** for approved applications, subject to the applicable SPP product specification, installation requirements and warranty conditions."

COMPATIBILITY & FASTENING

Statements from Kop-Coat:

- "Corrosion resistant fasteners, fixings and connectors such as hot-dip galvanised or stainless steel must be used in all applications."
- "H3 WBA treated timber is compatible with all common building materials."

APPLICATION IN PRACTICE

Customers can continue to use the product in the same way they previously used H3.2, including the use of hot-dip galvanised fixings for applications such as fixing cavity battens, subject to the relevant SPP product and installation requirements.

If you have any questions or require further technical literature, please do not hesitate to contact your Southern Pine Products representative.
